Racionalizar:

Racionalizar es quitar del denominador las raíces. Se pueden presentar dos casos:

a) En el denominador hay sólo una raíz. en este caso, la raíz se elimina multiplicando el numerador y el denominador el mismo número de veces que el radical de la raíz.

 b) En el denominador hay una raíz y otro término que la suma o la resta. En este caso, las raíz o raíces se eliminan multiplicando el numerador y el denominador por el conjugado del denominador.
